HYPOTHESES

I. Do we have a correlation between extreme weather conditions and the number of delayed or cancelled flights?

- H_0 : There is no correlation.

II. Were Airports that were not directly in the epicenter of the blizzard still affected by the extreme weather conditions?

- H_0 : Only the epicenter affects airports.

III. Did the air pressure influence the cancellation count and amount of delays?

- H_0 : The air pressure is not significant.

Data Analysis Approach

50352 rows x 43 rows in final DF

✓ GLIEDERUNG

- ✓ M↓ March 2019 North American Blizzard flights and weather EDA
 - ✓ M↓ Preparation and data retrieval
 - M↓ Imports
 - M↓ Path and download/unzipping
 - ✓ M↓ Dataframe creation and cleaning
 - M↓ Flights dataframe creation from csv
 - M↓ Preparing the csv file for further processing
 - M↓ Airport dataframe retrieval, cleaning and merging with flights
 - M↓ Cleaning of final flights dataframe
 - ✓ M↓ EDA of flights dataframe
 - M↓ Counting to see how big our sample sizes are
 - M↓ Groupbys with cancelled percentages for origin airports
 - M↓ Plotting origin insights
 - M↓ Groupbys for destination flights cancellations
 - M↓ Delay sum in origin airports
 - M↓ Delay sum in destination airports
 - M↓ Push the prepared data to a table in the database

mer: Zunehmende Wärme
r: Zunehmende Kälte. Fro
r: Kühl. Plötzl. Fallen: Gewit
Abnehmende Kälte. Tauwet

Air pressure in hPa March 8 to 16

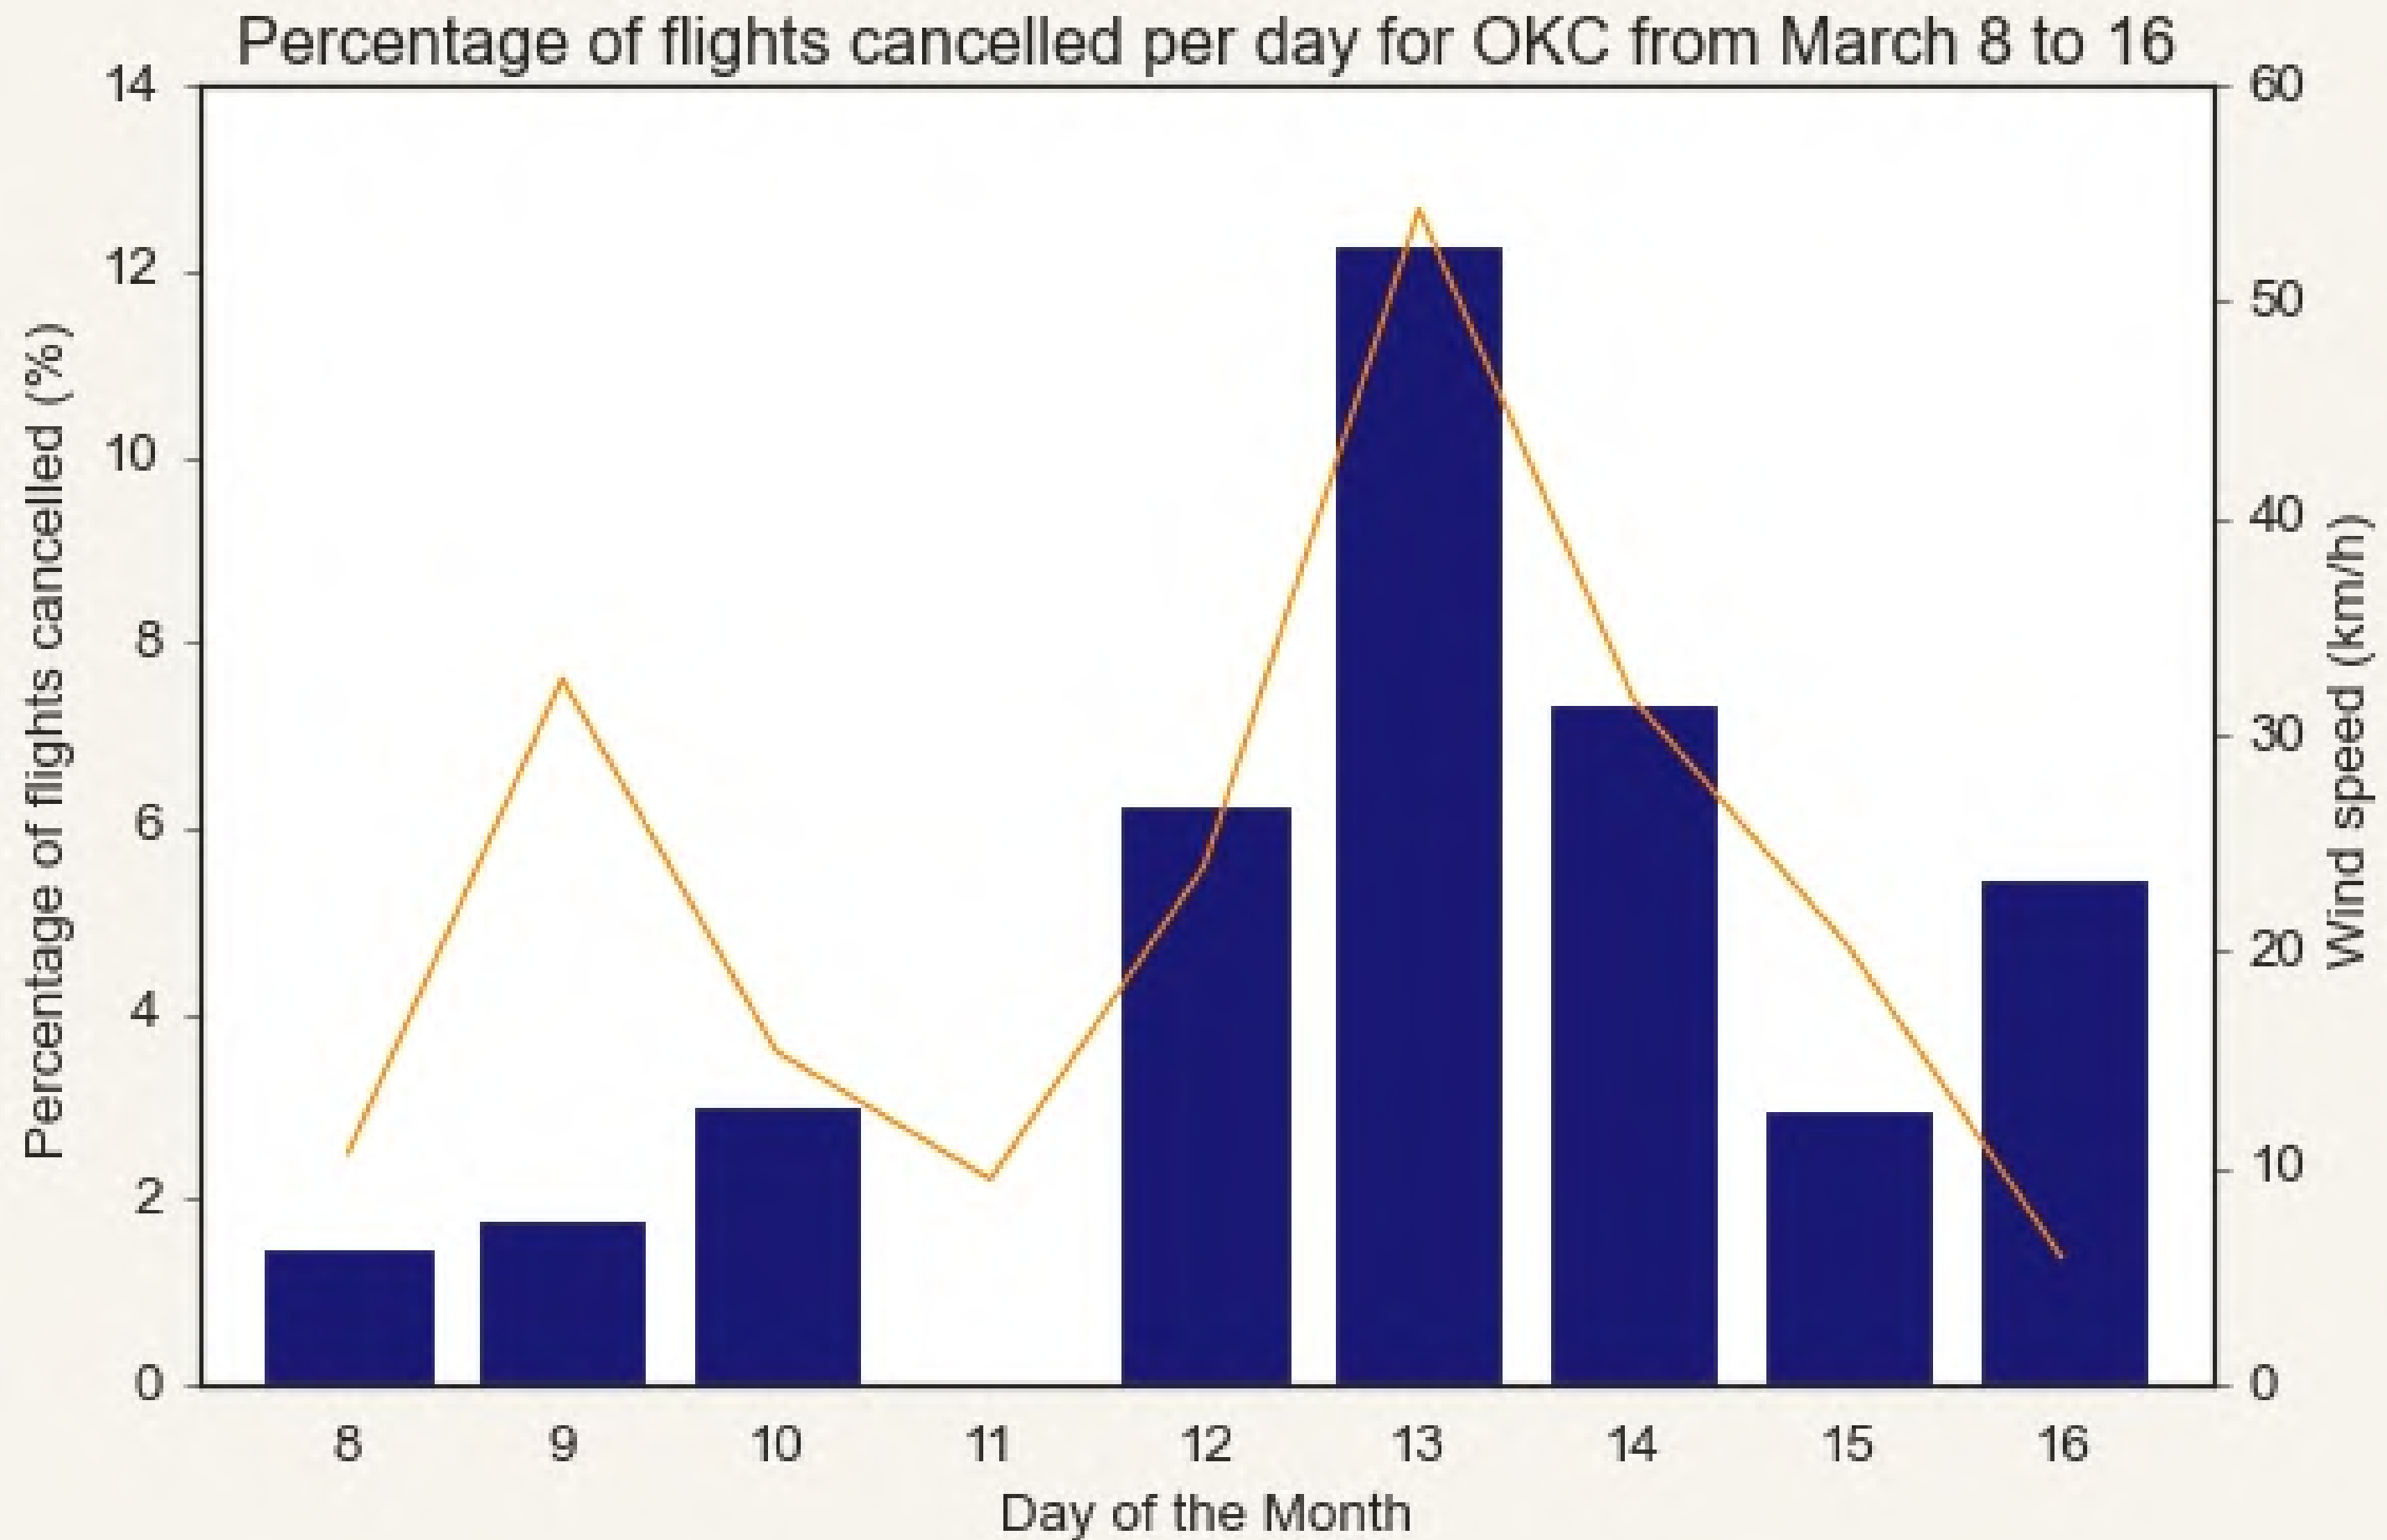

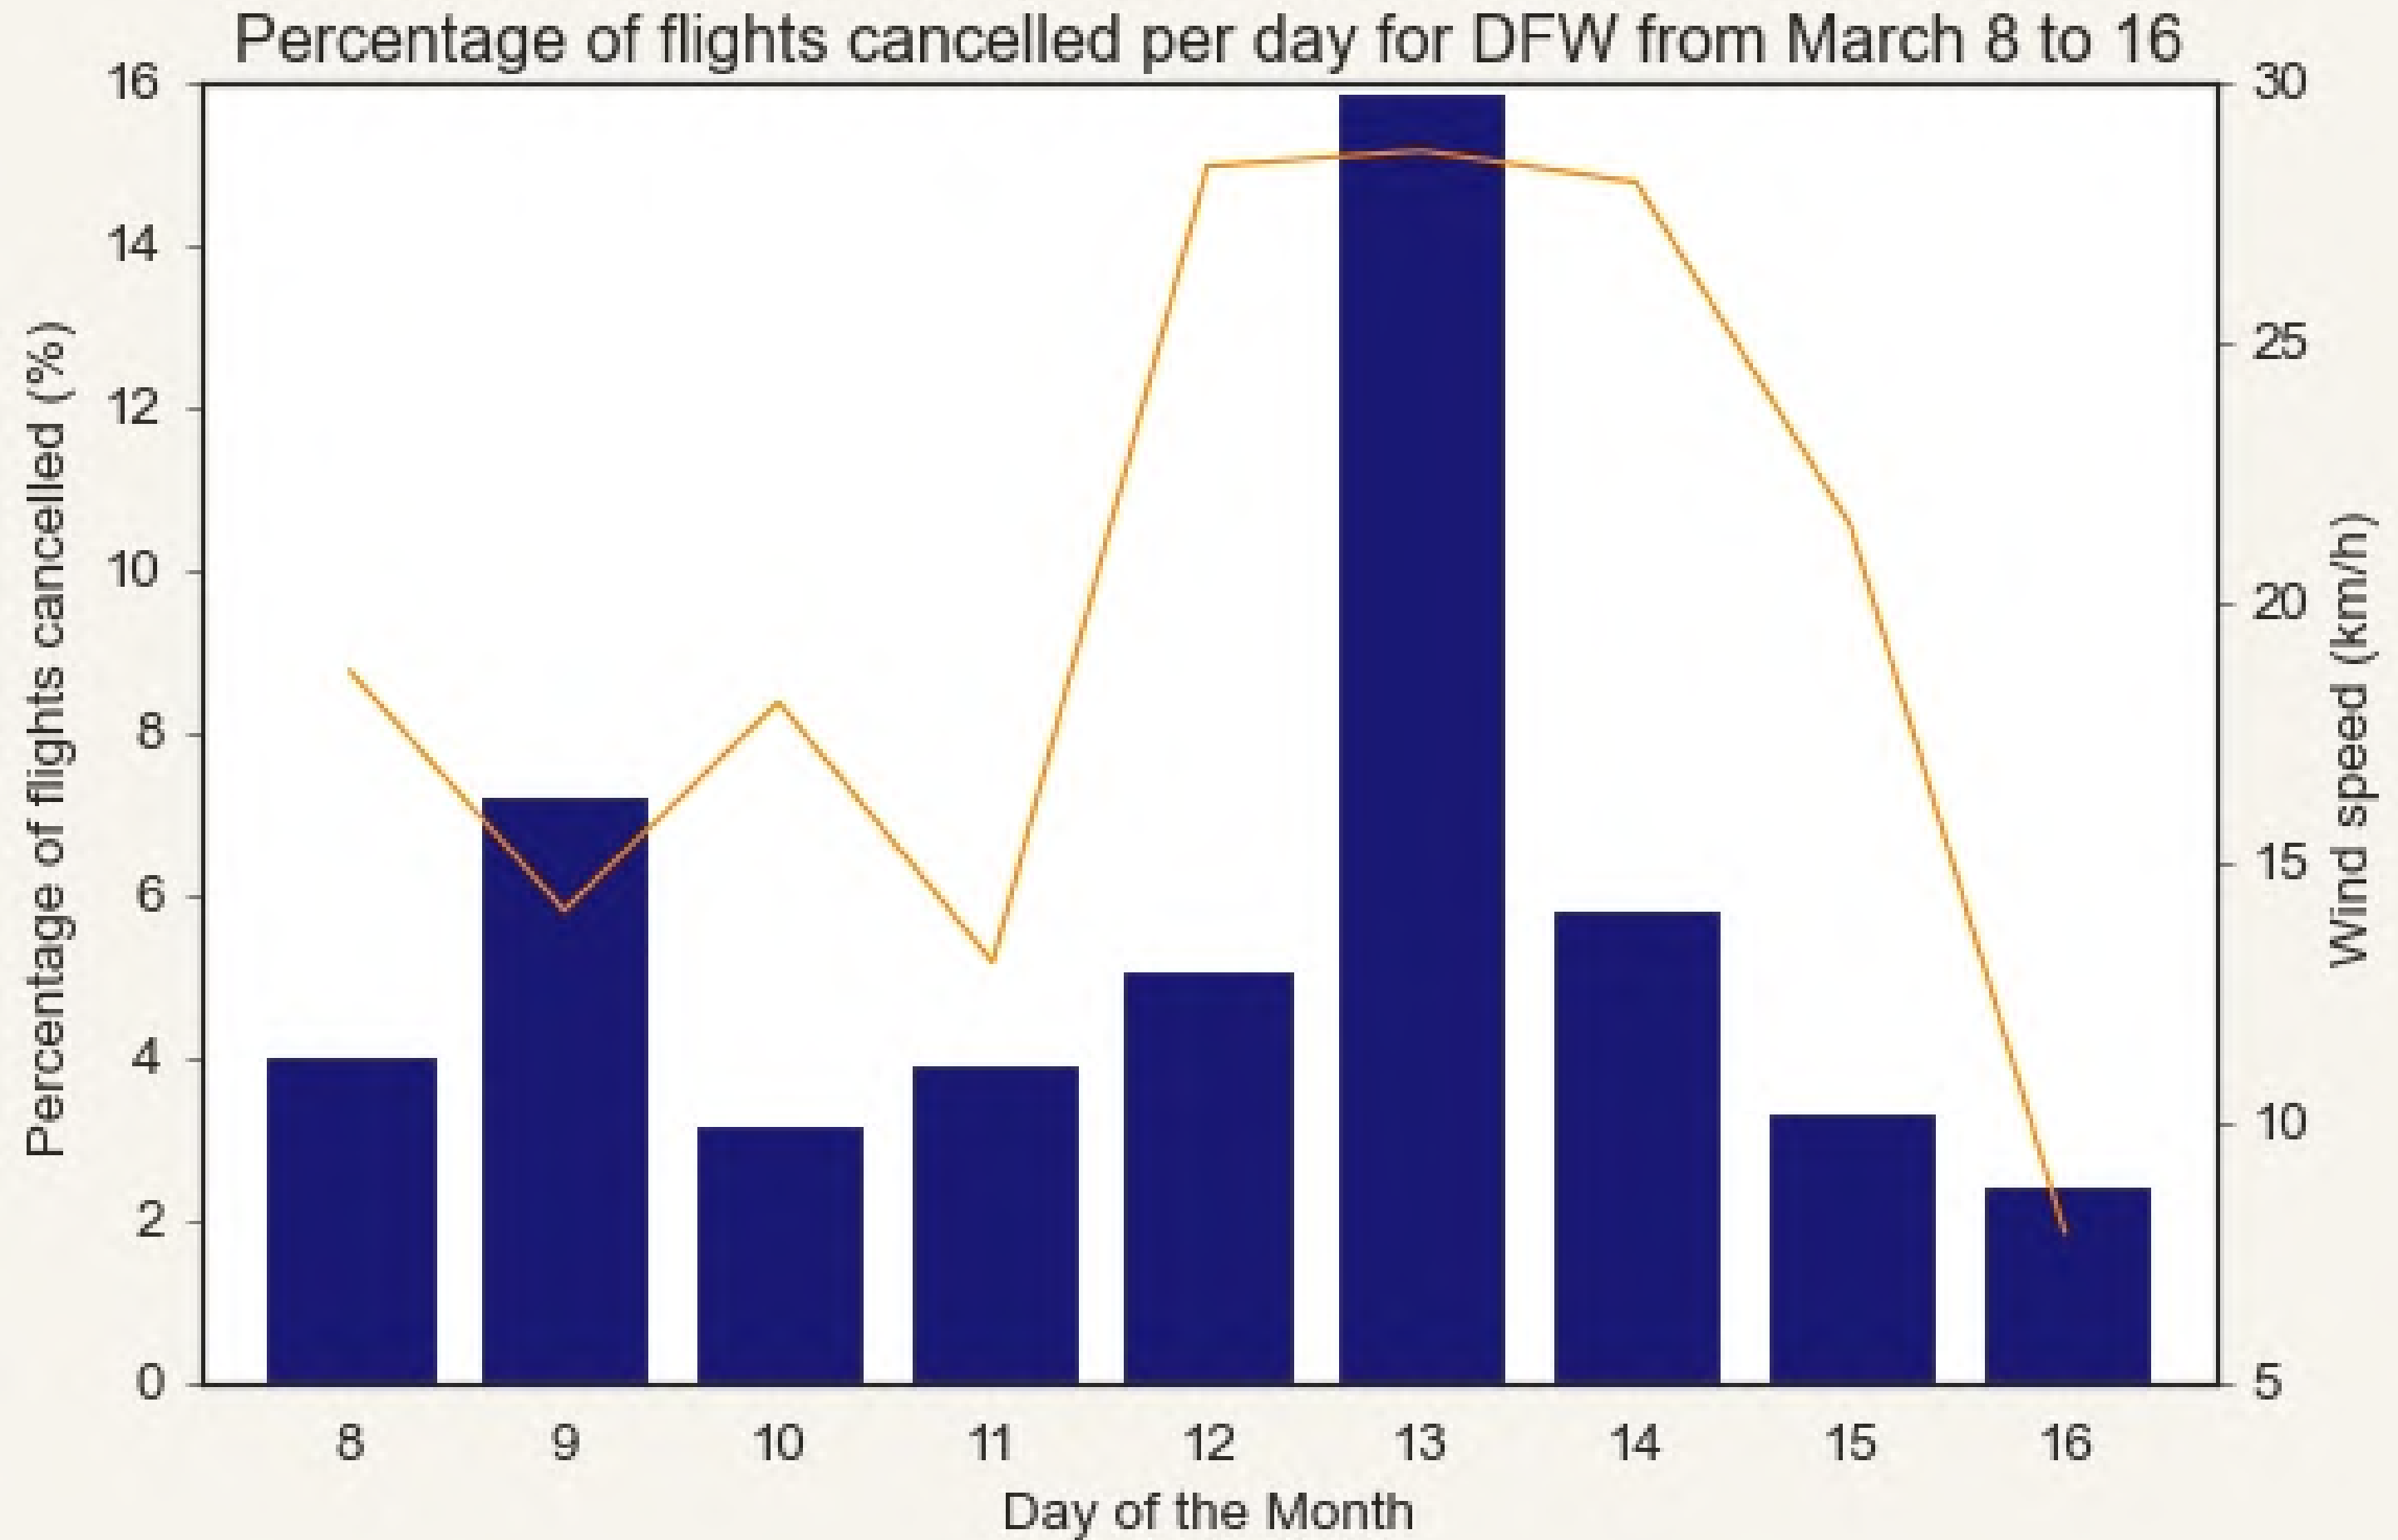

03

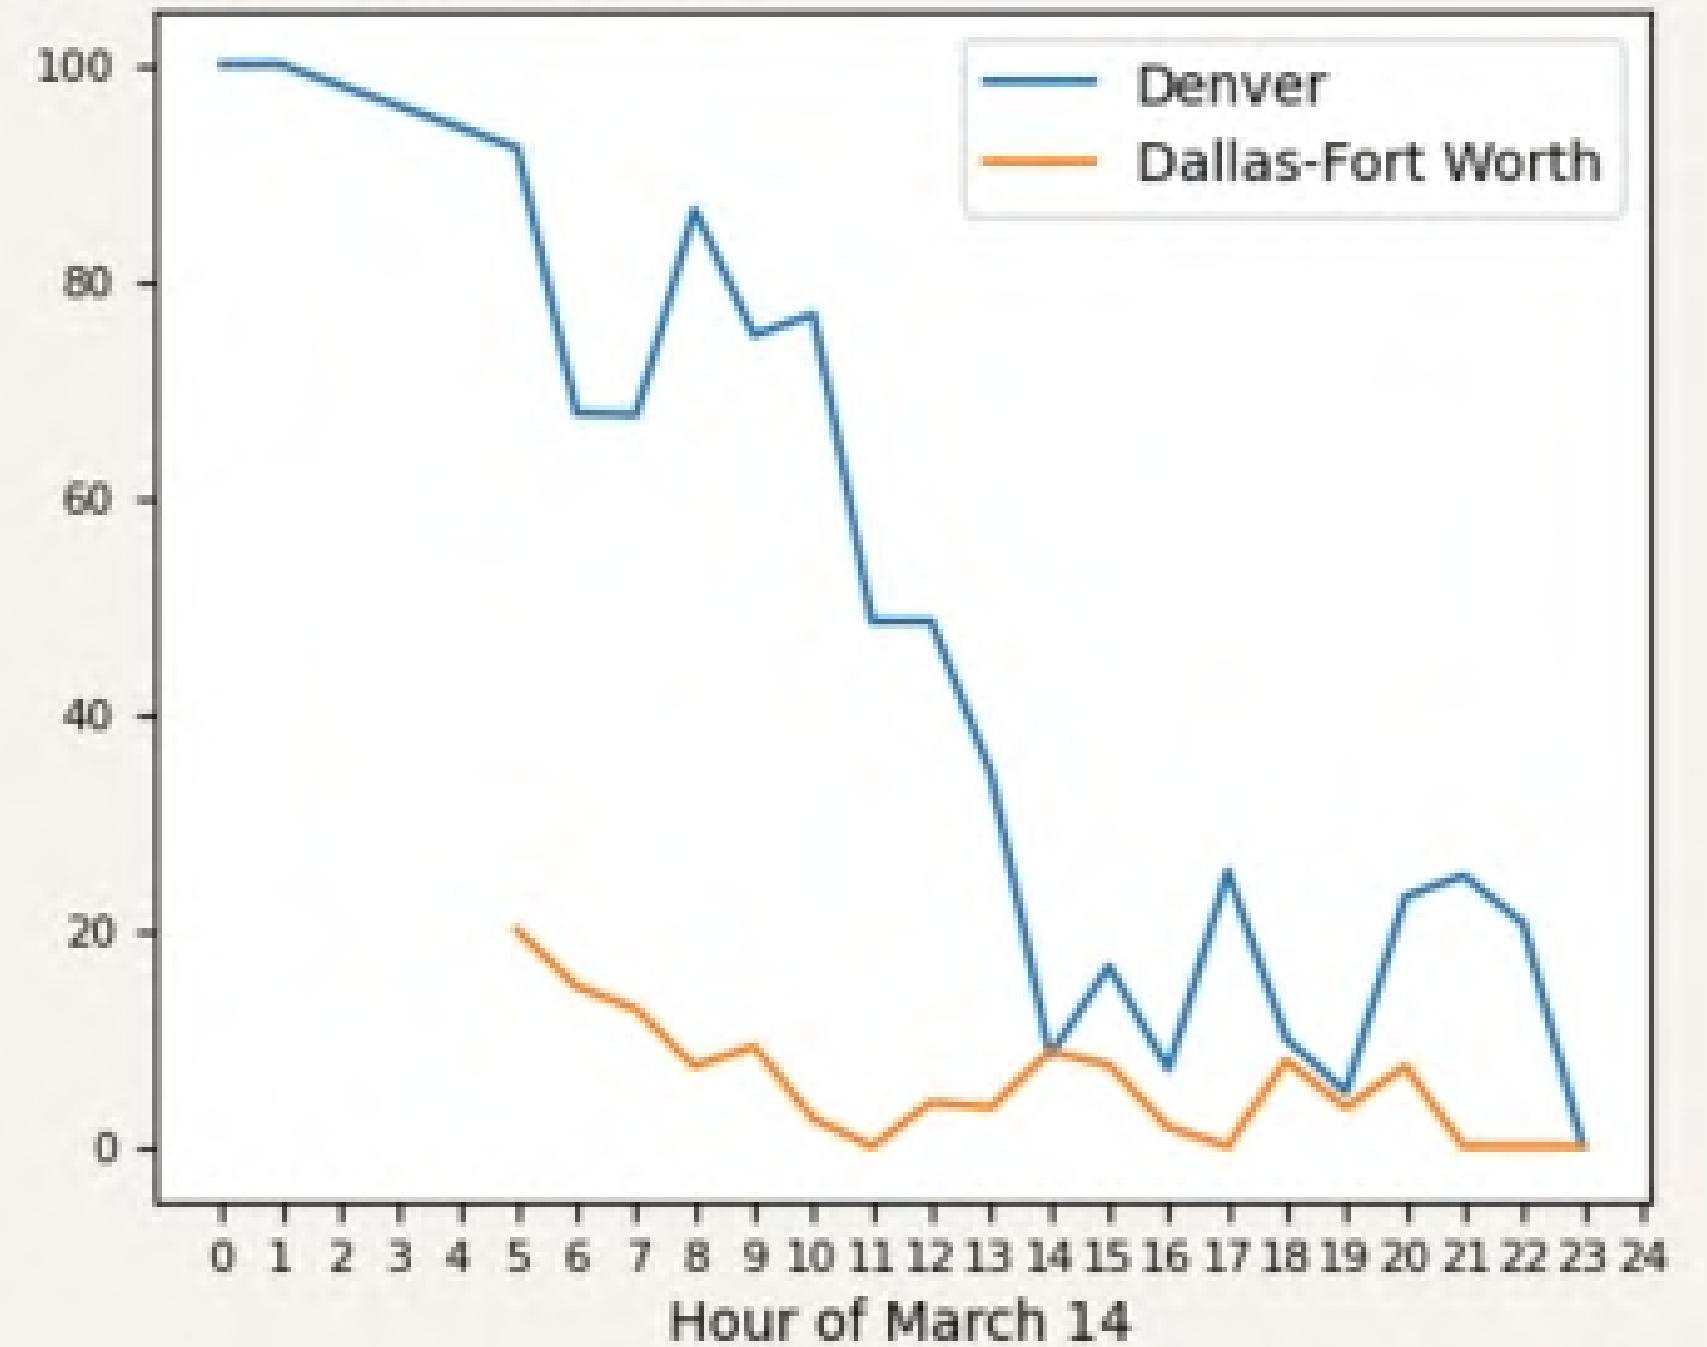

INSIGHTS

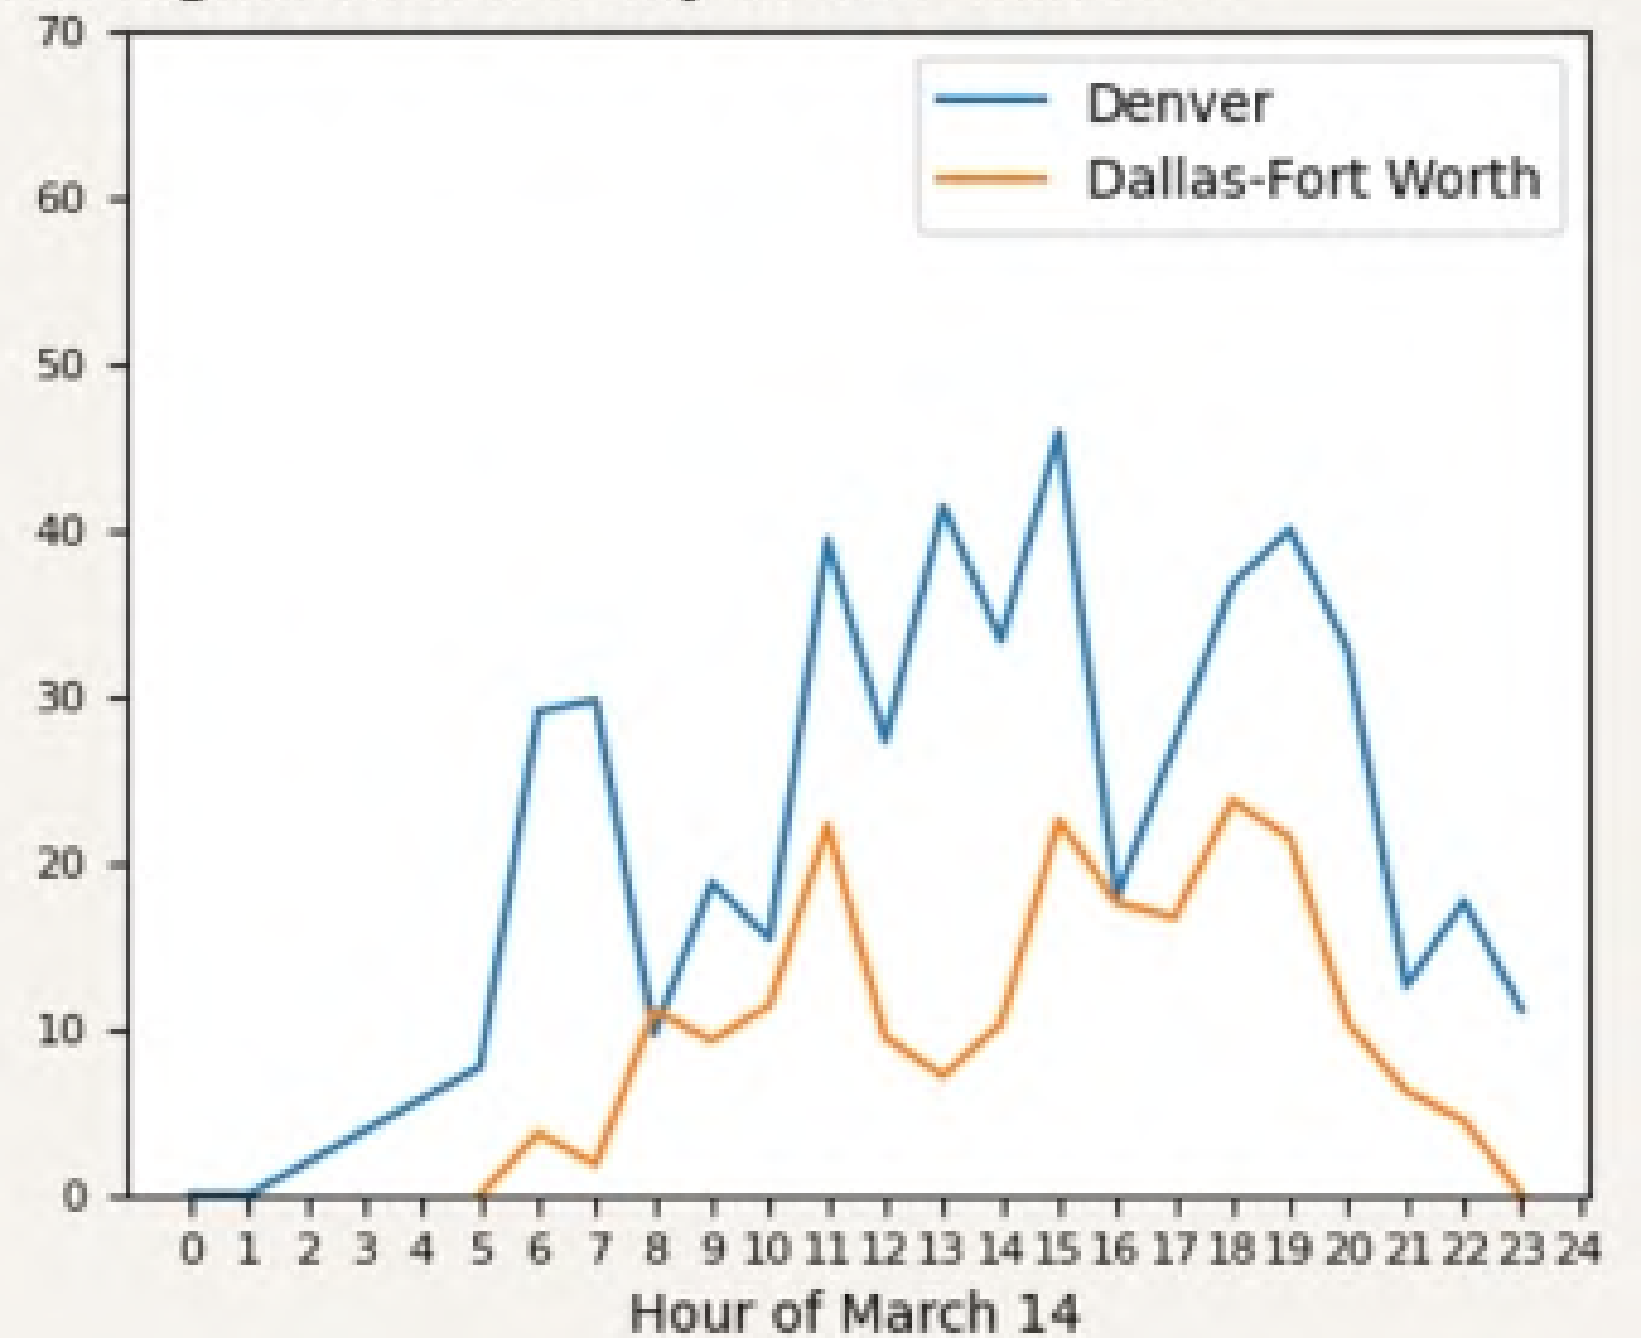

Denver and Dallas-Fort Worth Airport
March 13 and 14 percentage of cancelled flights

Denver and Dallas-Fort Worth Airport
March 13 and 14 percentage of non-cancelled flights with a delay of 60+ minutes

Based on our analysis snowfall is likely causing more cancellations than high wind speeds alone.

Even airports that were not directly in the epicenter of the blizzard, had high cancellation counts and delayed flights.

THANK

YOU
